Recruiting Frontend Web Developers

Frontend Web Developer

Recruiting DevOps Engineers

Watch videos explaining each mind map in the members area at

<https://courses.techrecruitmentacademy.com/courses/enrolled/2020177>

The screenshot shows a course interface with a sidebar on the left containing various topics like 'Starting From Scratch', 'IT Candidate Psychology', and 'Recruiting Strategies'. The main content area displays a video titled 'IT Roles' with a play button and a progress bar at 13:50. Below the video is a PDF document titled 'Mind map - IT Roles - Detailed Condensed.pdf'. The mind map in the PDF is a complex diagram with 'IT Roles' at the center, branching into 'Desktop App Developers' (Application developer, Java developer), 'Analysts' (Business analyst, System analyst, Data warehouse analyst, Data analyst), and other roles.

This video shows a mind map for cross-platform development. The central node is 'Cross-platform', which branches into 'Platform-specific' (Windows, Mac) and 'Cross-platform'. Under 'Platform-specific', 'Windows' leads to 'C# language' (WPF framework or WinForms) and 'Objective-C language' (Cocoa framework). 'Mac' leads to 'Swift language' (Cocoa framework). Under 'Cross-platform', 'Java language' leads to 'Swing framework', 'JavaScript language' leads to 'Electron framework', 'C++ language' leads to 'Qt framework', 'Python language' leads to 'pyQt framework', and 'C# language' leads to 'Unity framework'.

This video shows a mind map for Java development. The central node is 'Java development', which branches into 'Frameworks', 'APIs', and 'Reactive'. 'Frameworks' further branches into 'Web Development Frameworks' (Apache Struts, GWT, JSF, Play, Quarkus) and 'Enterprise Frameworks' (Spring Framework, Jakarta EE, Jackson, Gson, REST, Jersey). 'Spring Framework' branches into 'Spring Boot', 'Spring Data', 'Spring Security', and 'Spring Cloud'. 'Jakarta EE' branches into 'JPA', 'JMS', 'JAX-WS', 'CDI', and 'EE Security'. 'Reactive' leads to 'Hibernate - Object Relational'.

This video shows a mind map for the PHP development landscape. The central node is 'PHP Development Landscape', which branches into 'Roles' (Fullstack PHP developer, Backend PHP developer), 'Frameworks' (CodeIgniter, CakePHP, Phalcon, Slim, Nette, Zend, Yii2), 'Testing Frameworks', 'Versions', and 'Package managers'. 'Roles' branches into 'Backend (API) + Frontend (React / Angular)' and 'Backend (API) + Frontend (React / Angular)'. 'Backend (API) + Frontend (React / Angular)' branches into 'REST API', 'SOAP API', 'Doctrine 2', and 'Propel'. 'Backend (API) + Frontend (React / Angular)' also branches into 'Popular stack' (LAMP) and 'Backend (API) + Frontend (React / Angular)'. 'LAMP' branches into 'Linux (operating system)', 'Apache (web server)', 'MySQL (relational database)', and 'PHP (programming language)'. 'Backend (API) + Frontend (React / Angular)' also branches into 'IDEs & Code editors' (PHPStorm, NetBeans, Aptana Studio, Eclipse, ZendStudio, Sublime Text, Visual Studio Code, Atom, Notepad++), 'Code editors', and 'Code'.

Our Best Training Programs

- **1-month** Live training
- Quick confidence increase
- Essential IT terminology

Starts at only €449

- **3-month** Live training
- **Full-cycle** IT recruitment
- Guaranteed job offer
- Work on **real IT vacancies**

Starts at €449 x 4 payments

Work on real jobs & earn money when one of your candidates is hired.

- **12-month** Live training
- Full-cycle IT recruitment
- Get your **own clients**
- Annual coaching
- **VIP partner training**

Starts at €7,992 / year

Can be paid from commissions earned after you get new clients on board.

Recruiting Frontend Web Developers

SAMPLE

Watch Michal explain this mind map [in the eLearning portal](#)

Recruiting Full-Stack JavaScript/TypeScript Web Developers

Watch Michal explain this mind map [in the eLearning portal](#)

A Full Stack JavaScript developer is responsible for developing both the front-end and back-end parts of a web application using the JavaScript programming language. They use a range of technologies and frameworks, including HTML, CSS, JavaScript, Node.js, and various front-end frameworks like React, Angular, or Vue, among others.

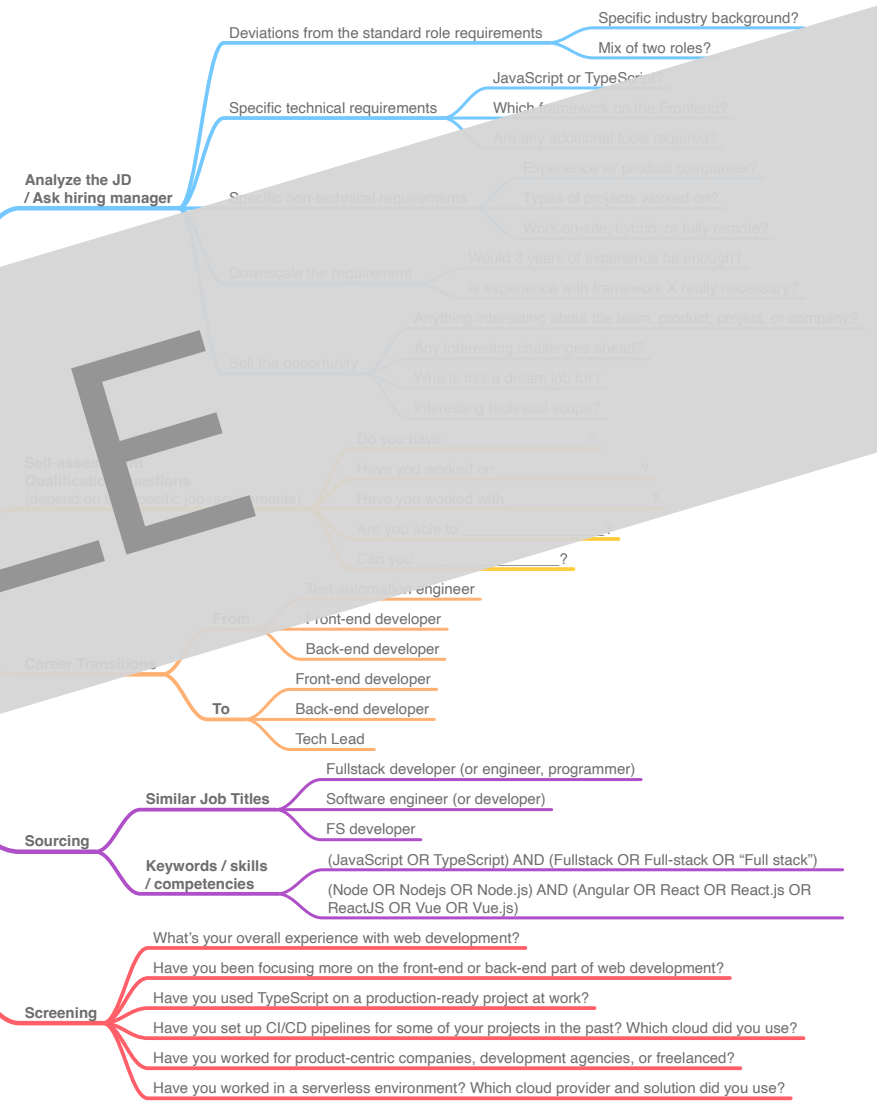

On the front-end, Fullstack JavaScript developers work to create the user interface and experience of a web application. This involves designing and coding the layout, structure, and interactivity of web pages, as well as creating any animations or dynamic effects.

On the back-end, Fullstack JavaScript developers work to develop the server-side of a web application. This includes building APIs, managing databases, and handling server-side logic and business rules.

In summary, a Fullstack JavaScript developer is responsible for developing both the client-side and server-side of a web application using JavaScript and its associated frameworks and libraries. They work on the entire web development stack, from the front-end user interface to the back-end server infrastructure.

https://www.linkedin.com/search/results/people/?keywords=engineer&origin=FACETED_SEARCH&sid=zf_a&titleFreeText=%22JavaScript%20Fullstack%20Developer%22

SAMPLE

Recruiting Backend C# Web Developers

A backend C# developer is responsible for building and maintaining the "backend" of a software application using the C# programming language.

In simple terms, the "backend" of an application is the part that users don't see, but that makes the application work. It's where data is stored, processed, and manipulated.

As a C# developer, the individual would use their knowledge of the C# language and related technologies to create the logic and functionality that allows an application to work properly. They might work on tasks such as creating and maintaining databases, building web services and APIs (Application Programming Interfaces), and integrating different systems and technologies together.

Their work might involve working closely with frontend developers, who focus on the parts of the application that users see and interact with, to ensure that the frontend and backend work seamlessly together.

Overall, a backend C# developer plays a critical role in building the foundation of a software application, ensuring that it can perform its intended functions in a smooth and reliable manner.

Watch Michal explain this mind map [in the eLearning portal](#)

Brief

Sample profiles

Common requirements (Standard Skills)

- Web development: Focus on the Back end + Database
- Languages: C#, F#, Visual Basic
- Frameworks: .NET, .NET Framework, .NET Core, ASP.NET, Xamarin (mobile development), Unity (game development), ...
- Libraries: Newtonsoft.Json, Dapper ...
- Testing: NUnit, xUnit, ...
- Code storage: Git, Github, Gitlab, Bitbucket ...
- Cloud: Azure, AWS, GCP, ...
- DevOps: Azure DevOps, Jenkins, Docker, TeamCity...

Analyze the JD (As a hiring manager)

- Deviations from the standard role requirements
 - Specific industry background?
 - Mix of two roles?
 - Do you require the developer to write SQL or do you use ORM?
- Specific technical requirements
 - Which cloud provider do you use?
 - Should the developer have experience with any specific DevOps?
 - Experience with product companies?
- Specific non-technical requirements
 - Types of projects worked on?
 - Work on remote?
 - Would 3 years of experience be enough?
 - Is experience with work X really necessary?
 - Any interesting about the company or company?
 - Any interesting about the product?
 - Who is your competition?
 - Interesting technical scope?

Recruiting Backend C# Developers

SAMPLE

Sourcing

Similar Job Titles

- .NET Developer (or engineer, programmer)
- Fullstack Developer
- C# Developer
- ASP.NET Developer

Keywords / skills / competencies

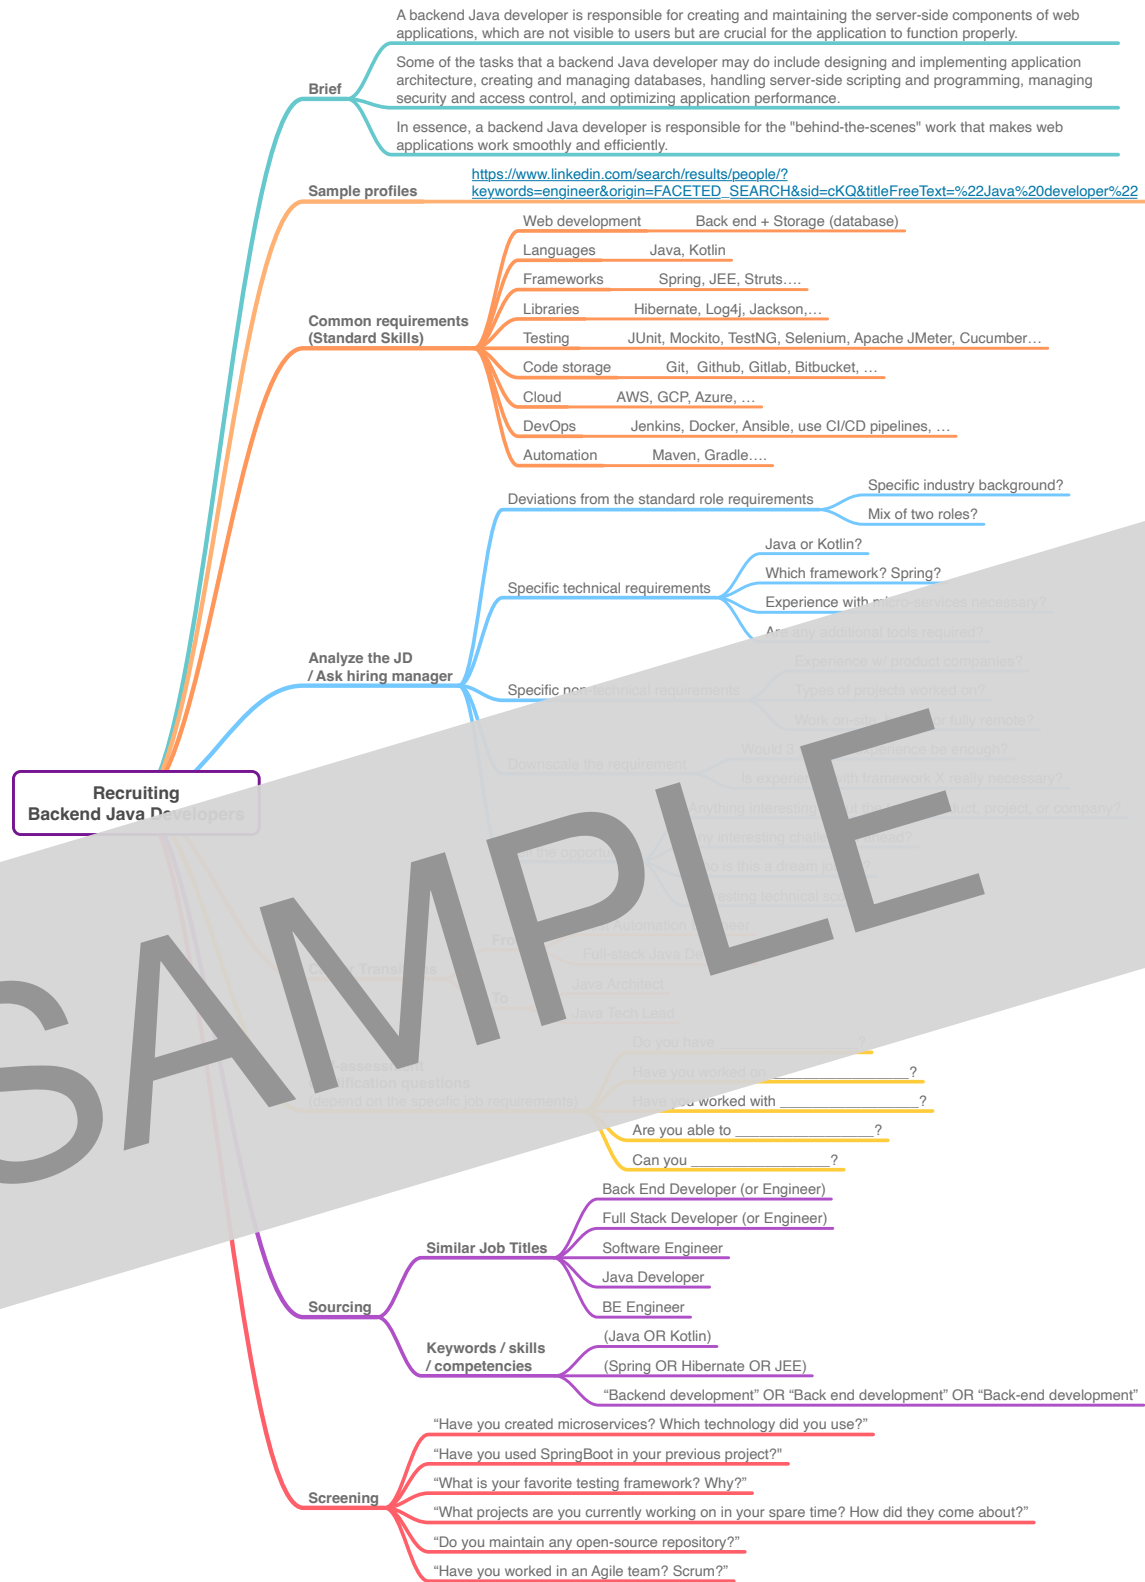

- (C# OR .NET OR ASP.NET) AND (Developer OR Programmer OR Engineer)
- (Backend OR Back-end OR "Back end") AND (C# OR .NET OR ASP.NET) AND (developer OR engineer OR programmer)

Screening

- When did you start developing applications with C# .NET?
- What kinds of projects have you worked on? (Scale)
- What's the largest team you worked with?
- What testing framework did you use on your previous project?
- Have you also created any mobile applications with Xamarin?
- Have you also been responsible for the UI/frontend on any of your previous projects?

Recruiting Backend Java Web Developers

Watch Michal explain this mind map [in the eLearning portal](#)

SAMPLE

Recruiting Fullstack PHP Developers

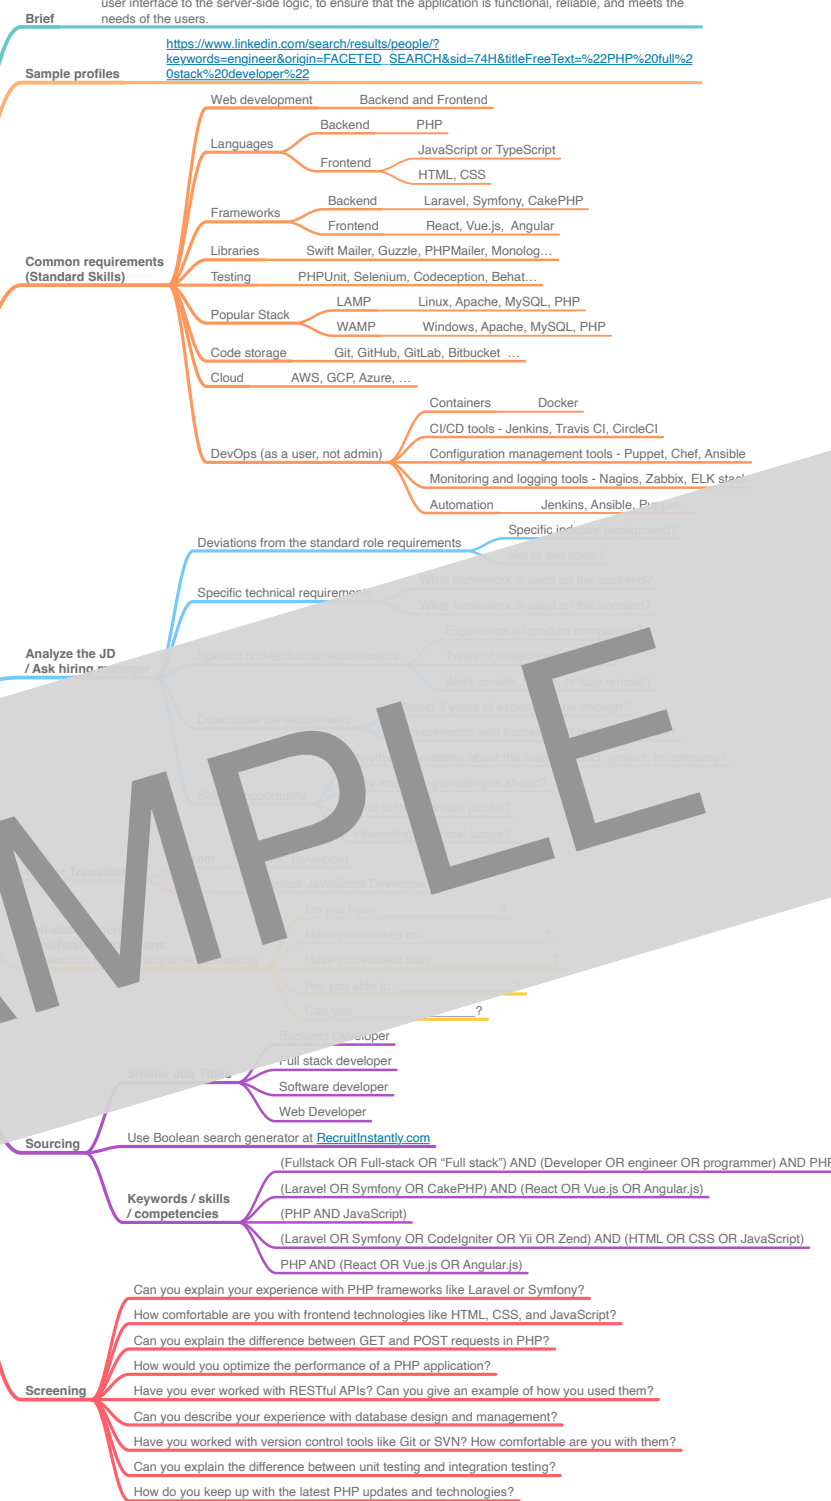

A PHP Full stack Developer is responsible for building a web application from the ground up, using a combination of frontend and backend technologies. They work on all aspects of the application, from the user interface to the server-side logic, to ensure that the application is functional, reliable, and meets the needs of the users.

Watch Michal explain this mind map [in the eLearning portal](#)

SAMPLE

Recruiting FullStack PHP Developer

Recruiting SharePoint Developers

A SharePoint developer is responsible for creating, configuring, and customizing SharePoint sites and applications based on the needs of an organization. They use programming languages like C#, JavaScript, and HTML to build customized solutions that improve collaboration, document management, and business processes.

SharePoint is a web-based platform developed by Microsoft that provides organizations with tools to create and manage content, documents, and business workflows. As a SharePoint developer, you may be responsible for creating custom web parts, workflows, forms, and pages that meet specific business requirements. You may also be responsible for configuring and maintaining the SharePoint infrastructure, including the database, server, and security settings.

In addition to programming skills, SharePoint developers should have a good understanding of SharePoint architecture and best practices for developing and deploying SharePoint solutions. They should also be familiar with other Microsoft technologies such as .NET Framework, SQL Server, and Visual Studio.

DevOps Overview

DevOps integrates **developers** and **operations** teams in order to improve collaboration and productivity by automating infrastructure, automating workflows and continuously measuring application performance.

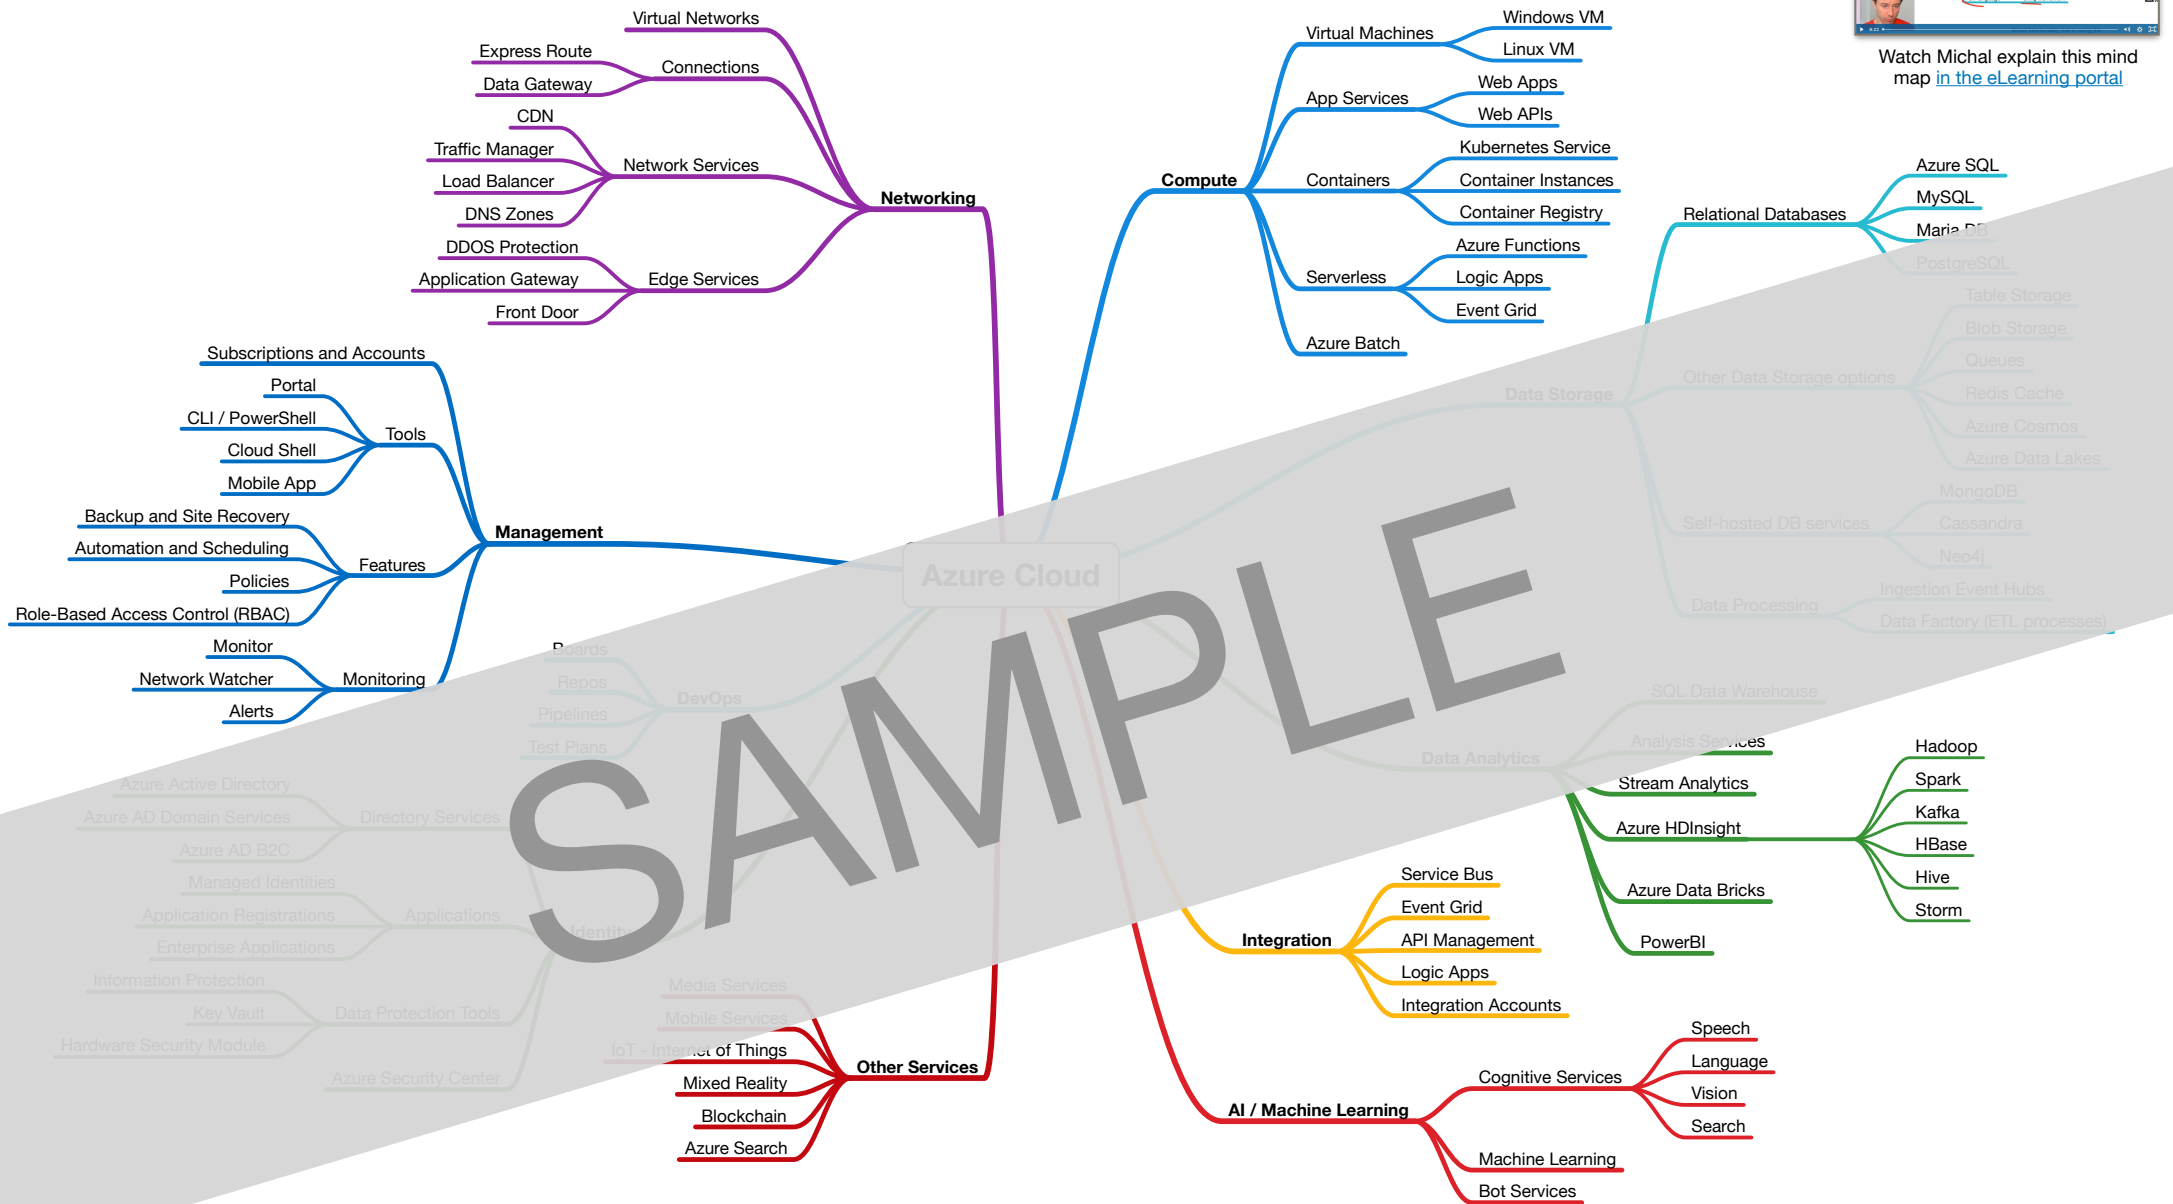

Continuous Integration (CI) is a practice of merging changes produced by developers as often as possible, even a couple of times a day.

Continuous Delivery (CD) is practice of automating release related tasks, and making sure that every tested change is ready for delivery.

Data Skills Overview

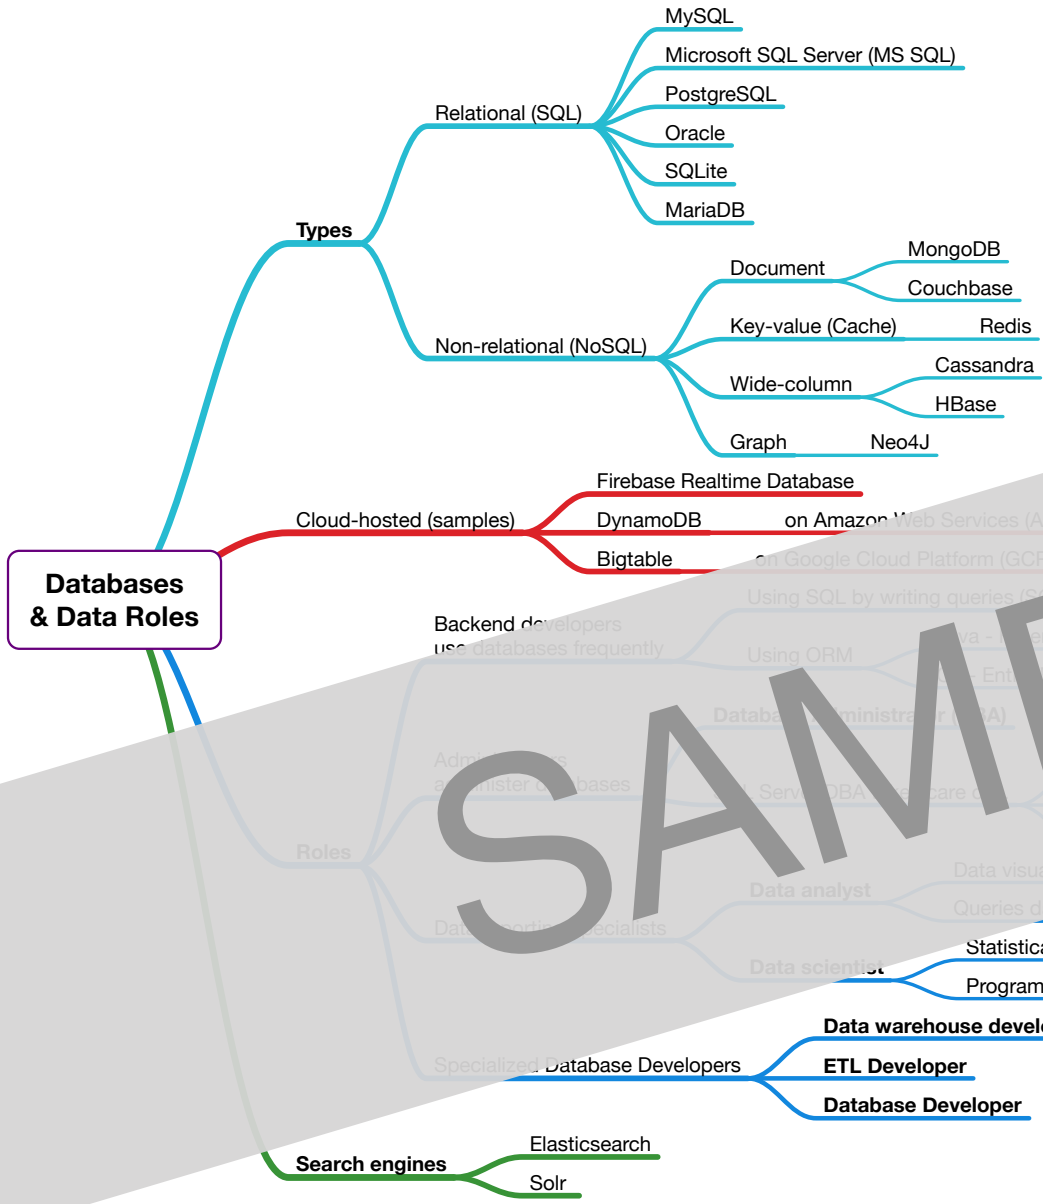

Watch Michal explain this mind map [in the eLearning portal](#)

SAMPLE

Databases & Data Roles Overview

Watch Michal explain this mind map [in the eLearning portal](#)

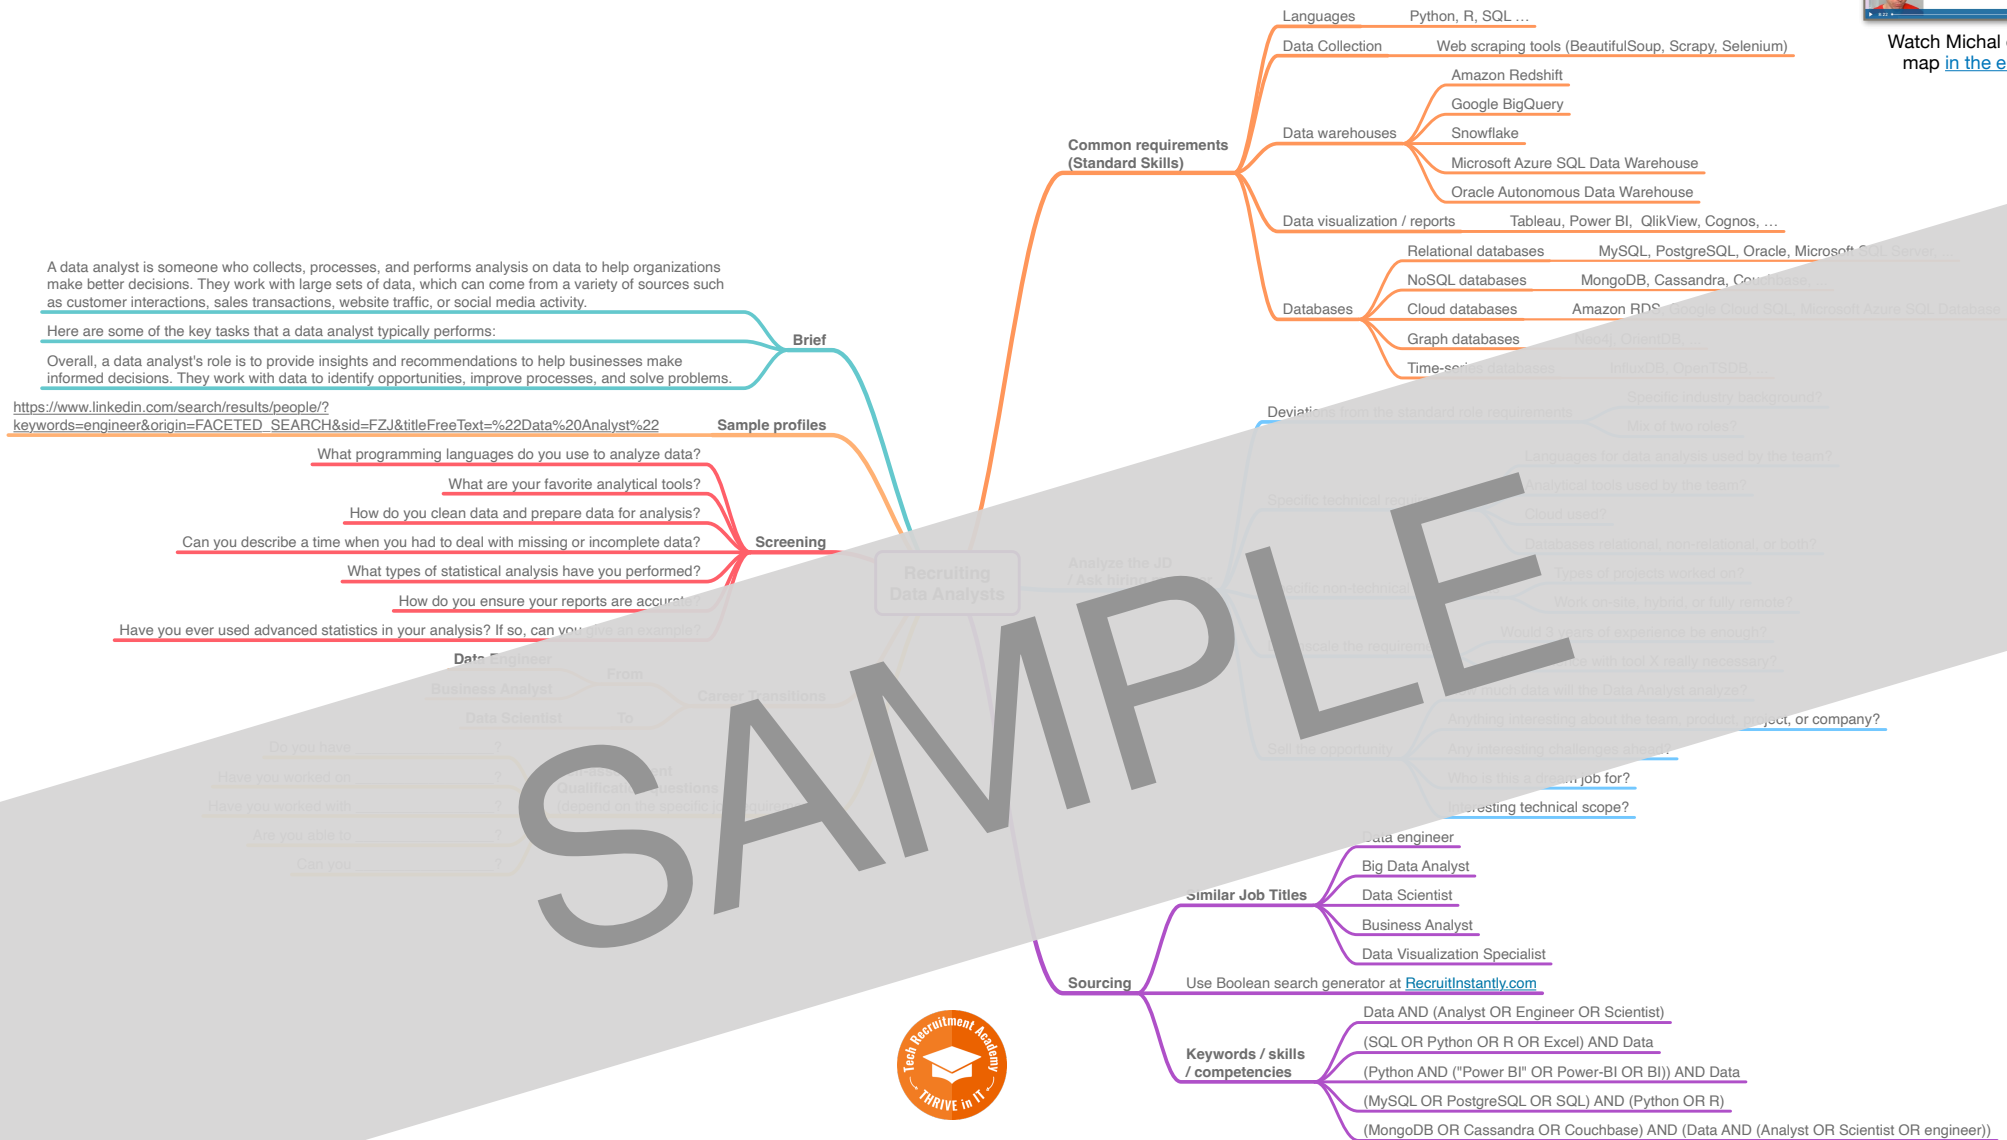

Source: Stack Overflow Survey 2019

SAMPLE

Recruiting Data Analysts

Watch Michal explain this mind map [in the eLearning portal](#)

Recruiting Data Engineers

Watch Michal explain this mind map [in the eLearning portal](#)

A data engineer is someone who designs and builds the systems and infrastructure needed to collect, store, process, and analyze large amounts of data. Data engineers work behind the scenes to ensure that data is available and accessible to other members of the organization who need to analyze it, such as data analysts, data scientists, or business intelligence professionals.

Data engineers are responsible for tasks such as:

Building data pipelines: Data engineers design and build pipelines that move data from various sources (such as databases, APIs, or IoT sensors) to a central data storage location, such as a data warehouse.

Designing data architecture: Data engineers determine the most effective way to organize and store data so that it can be easily accessed and analyzed.

Developing data infrastructure: Data engineers design and build the hardware and software systems needed to support large-scale data processing and analysis, such as distributed computing systems or cloud computing services.

Ensuring data quality: Data engineers monitor data quality to ensure that it is accurate, complete, and consistent.

Optimizing data performance: Data engineers identify and fix performance issues in data processing and storage systems to ensure that data is accessible and can be analyzed quickly.

In summary, a data engineer is responsible for designing and building the systems and infrastructure that enable organizations to collect, store, process, and analyze large amounts of data, so that other members of the organization can make data-driven decisions.

https://www.linkedin.com/search/results/people/?keywords=engineer&origin=FACETED_SEARCH&sid=rRa&titleFreeText=%22Data%20engineer%22

Analyze the JD / Ask hiring manager

- Deviations from the standard role requirements
 - Specific industry background needed?
 - Mix of engineering and analytics role?
- Specific technical requirements
 - Do you store data in the cloud?
 - Which data warehouse solution do you use?
 - Which data pipeline system do you use?
 - Do you use PL/SQL or Python to migrate data?
- Specific non-technical requirements
 - Types of data projects worked on?
 - Experience with analytics or reporting necessary?
 - Work on-site, hybrid, or fully remote?
 - Would 3 years of experience be enough?
 - Is experience with tool X really necessary?
- Downsize the requirement
 - Anything interesting about the team, product, project, or company?
- Sell the opportunity
 - Any interesting challenges ahead?
 - Who is this a dream job for?
 - Interesting data to analyze? How much data to process?

SAMPLE

Keywords / skills / competencies

- Use Boolean search generator at [RecruitInstantly.com](#)
- (Data AND Engineer)
- (Python OR Java OR Scala OR Go OR Bash OR Perl) AND (Hadoop OR Spark OR Hive OR Pig)
- Data AND (Integration OR Modeling OR Processing OR Security OR Architecture)
- MongoDB OR Cassandra OR "Amazon DynamoDB"
- MySQL OR PostgreSQL OR Oracle

Screening

- What experience do you have with database technologies? Which ones are you most familiar with?
- How do you ensure data quality and consistency in a data pipeline?
- Can you describe a time when you had to optimize a data pipeline for performance or efficiency?
- What ETL tools have you worked with in the past? Which ones are you most familiar with?
- How do you ensure the security and privacy of data in a data pipeline?
- What experience do you have with cloud computing platforms like AWS, Azure or GCP? Which services are you most familiar with?
- Can you explain the concept of data partitioning and how it can improve data processing?
- Can you describe how you would design a data architecture for a large-scale project?
- Have you ever worked with big data technologies like Hadoop, Spark or Flink? What was your role in the project?

Recruiting Linux Administrators

Brief

A Linux administrator is responsible for managing and maintaining Linux-based computer systems. This can include tasks such as installing and configuring software, monitoring system performance, troubleshooting issues, ensuring system security, and backing up important data.

Here are some specific examples of what a Linux administrator might do:

- Install and configure the Linux operating system on a server or desktop computer.
- Install and configure software programs, such as web servers, email servers, or databases, that run on the Linux system.
- Monitor system performance, such as CPU usage, memory usage, and disk space, to ensure the system is running smoothly.
- Troubleshoot issues that arise, such as system crashes or software errors, and implement solutions to fix the problems.
- Ensure the system is secure by implementing security measures such as firewalls, access controls, and system updates.
- Backup important data to prevent loss in case of a system failure or disaster.

Overall, a Linux administrator plays a critical role in ensuring that Linux-based computer systems are running smoothly and securely, and that any issues are quickly resolved to minimize downtime and data loss.

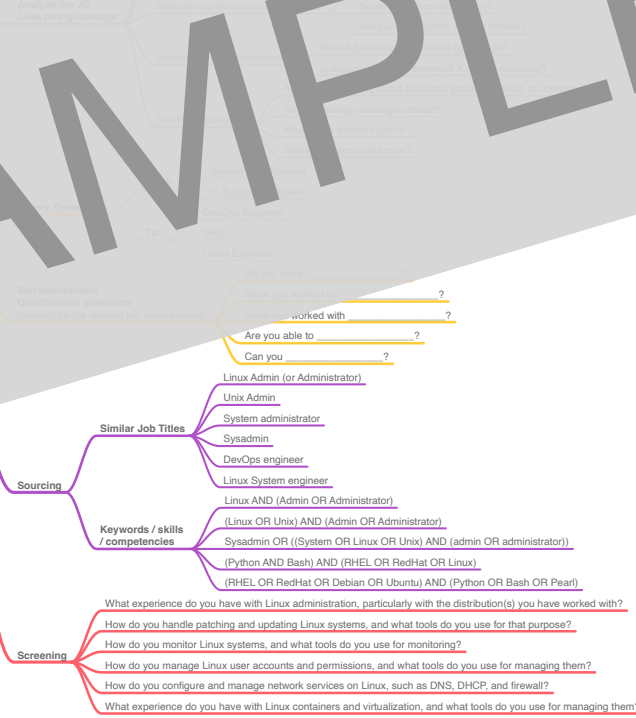

- Sample profiles**
- https://www.linkedin.com/search/results/people/?keywords=engineer&origin=FACTED_SEARCH&sid=62u&titleFreeText=%22Linux%20Administrator%22
- Languages: Scripting, Python, Bash, Shell, PowerShell, Perl
 - Linux distribution (used in enterprise and server environments): Red Hat Enterprise Linux (RHEL), Ubuntu Server, CentOS, Debian, SUSE Linux Enterprise Server (SLES)
 - Networking tools: netstat, ifconfig, tcpdump, nmap, traceroute, iptables, ssh, ...
 - Security: Firewalls (iptables, firewallD), SELinux, AppArmor, OpenVAS, OpenSSL, AIDE, Snort, ClamAV, ...
 - System Administration:
 - Package management tools: apt, yum, dnf, pacman
 - Process management tools: top, htop, ps, kill
 - Log management tools: syslog-ng, rsyslog, logrotate
 - Disk management tools: fdisk, lsblk, dt, mount
 - Backup and recovery tools: tar, rsync, Rsync
 - User and group management tools: useradd, userdel, usermod, groupadd, groupdel, groupmod
 - Configuration management: Chef, Ansible, ...
 - Monitoring: Nagios, NewRelic, ...
 - Troubleshooting: ...

SAMPLE

Recruiting System Administrators

System Administrator is someone who is responsible for managing and maintaining computer systems and networks for an organization. Their job involves a wide range of tasks such as setting up and configuring hardware and software, monitoring system performance, troubleshooting issues, ensuring system security, and backing up data.

Brief
In other words, a system administrator is like a caretaker for an organization's computer systems. They work behind the scenes to make sure that everything runs smoothly and that employees have access to the tools and resources they need to do their jobs effectively. Without system administrators, organizations would have a difficult time keeping their technology infrastructure up and running.

Recruiting Business Analysts

In the IT industry, business analysts play a crucial role in bridging the gap between technical teams and business stakeholders. They help ensure that IT projects and systems meet the needs and requirements of the business.

- Brief**
 - Gather requirements: The analyst collects information from stakeholders to understand what they need from an IT system or project.
 - Create project plans: They then use this information to develop a plan for the project, including timelines, budgets, and resources needed.
 - Define functional specifications: The analyst creates detailed specifications for how the system or project should function and what it should do.
 - Work with technical teams: The analyst collaborates with technical teams to ensure that the system or project is designed and built to meet the business's needs.
 - Test the system: The analyst helps test the system to ensure it meets the requirements and functions correctly.
 - Train users: The analyst may also train business stakeholders on how to use the system or project effectively.
- Overall, the role of a business analyst in the IT industry is to ensure that IT projects and systems meet the needs and requirements of the business while also ensuring they are technically feasible and efficient.

Sample profiles https://www.linkedin.com/search/results/people/?keywords=engineer&origin=FACETED_SEARCH&sid=j*z&titleFreeText=%22Business%20Analyst%22

- Common requirements (Standard Skills)**
 - Data Analysis: Microsoft Excel, SQL...
 - Data Modeling: UML (Unified Modeling Language), BPMN (Business Process Model and Notation), ERD (Entity Relationship Diagram), Visio, PowerDesigner
 - Business Intelligence (BI) tools: Tableau, Power BI, QlikView
 - Project Management tools: JIRA, Asana, Trello, Basecamp

- Deviations from the standard role requirements**
 - Specific industry background?
 - Mix of business and technical experience?
 - Industry background: Finance, Retail, Healthcare, etc.
 - Experience with specific IT products?
 - Experience with specific business processes?
 - Types of projects worked on?
 - Work on-site, hybrid, or fully remote?
 - Minimum 3 years of experience?
 - Business process modeling really necessary?
 - Anything else about the team, product, project, or company?
 - Any interesting challenges ahead?
 - Who is this a dream job for?

SAMPLE

- Career Transitions**
 - From: QA Analyst, QA Manager, Project Manager, Product Manager, Product Owner

- Self-assessment Qualification questions** (depend on the specific job requirements)
 - Do you have _____ ?
 - Have you worked on _____ ?
 - Have you worked with _____ ?
 - Are you able to _____ ?
 - Can you _____ ?

- Sourcing**
 - Similar Job Titles**: Business Analyst, IT Business Consultant
 - Use Boolean search generator at [RecruitInstantly.com](https://www.recruitinstantly.com)
 - Keywords / skills / competencies**: Business AND Analyst, (UML OR BPMN) AND (Business AND Analyst)

- Screening**
 - What is the weirdest business process you have ever modeled?
 - Do you use Enterprise Architect or Eclipse to model processes?

Recruiting Chief Information Security Officers (CISO)

Brief

A Chief Information Security Officer (CISO) is responsible for making sure that a company's information and data are secure. They lead the team that manages the security of the company's computer systems, networks, and other digital assets.

Some specific things a CISO might do include:

- Developing and implementing security policies and procedures
- Identifying and mitigating security risks
- Ensuring compliance with data protection regulations
- Managing security incidents and responding to cybersecurity threats
- Educating employees on best security practices
- Collaborating with other departments to ensure that security is integrated into all aspects of the business

In short, a CISO is in charge of keeping a company's digital information safe from cyber attacks and other security threats.

SAMPLE

Recruiting Information Managers

An Information Manager is a professional responsible for managing an organization's information assets, which may include digital or physical documents, data, or knowledge. The specific duties and responsibilities of an Information Manager can vary widely depending on the size and type of organization, but may include:

- Developing and implementing policies and procedures related to information management
 - Ensuring compliance with relevant regulations and standards related to information management, such as data privacy or retention policies
 - Designing and maintaining systems for managing and storing information, including databases or document management systems
 - Developing and delivering training programs to staff on information management best practices
 - Collaborating with other departments or stakeholders to identify information needs and improve processes for managing and sharing information
 - Ensuring the security and integrity of information assets, such as through access controls or encryption measures
 - Managing the lifecycle of information assets, including disposal or archival of records when necessary.
- Overall, the role of an Information Manager is to ensure that an organization's information assets are effectively managed, protected, and leveraged to support the organization's goals and objectives.

Sample profiles

- Document Management
- Information Management
- Data Management
- Knowledge Management
- Information Security
- Metadata management

Deviations from the standard role requirements

- Specific industry background?
- Mix of two roles?
- Certifications?
- Data regulations?
- Experience of the industry?
- Technical skills needed on?
- Work style, hybrid, or fully remote?
- Would 3 years experience be enough?
- Is experience from a related field really necessary?
- Anything interesting about the learn, product, project, or company?
- Is this a dream job for you?

Analyze the JD / Advertising manager

- Specific technical requirements
- Specific non-technical requirements
- Do you have any other questions?
- Call the opportunity an interesting challenge?
- Is this a dream job for you?

Recruiting Information Managers

SAMPLE

Searching

- Information Technology Manager
- Information Systems Manager
- Digital Asset Manager
- Information Services Manager
- Knowledge Manager
- (Information OR knowledge) AND (manager OR management)
- (metadata OR taxonomy OR ontology) AND (management OR manager)
- (information OR IT) AND (manager OR management OR director)
- (information OR knowledge OR data OR records OR content OR archives) AND (manager OR management OR director OR administrator OR coordinator)
- Data AND (Manager OR management OR Analyst OR Analysis)

Screening

- What experience do you have in managing information assets, including data and knowledge management?
- How do you ensure that information is accurate, relevant, and up-to-date?
- Can you describe a time when you had to develop and implement a system to organize and manage large amounts of information?
- How do you balance the need for security and confidentiality with the need for accessibility and ease of use of information?
- What experience do you have with information architecture and information governance?
- How do you manage data and information compliance with regulations such as GDPR or HIPAA?

Recruiting IT Product Managers / Product Owners

Watch Michal explain this mind map [in the eLearning portal](#)

Product Manager and Product Owner are two roles that are commonly found in organizations that develop and launch products. While there is some overlap between the two roles, they have distinct responsibilities and focus.

A Product Manager is responsible for the overall strategy and vision for the product. They work closely with the executive team to define the product roadmap and prioritize features based on customer needs and market trends. They also work with cross-functional teams to develop, launch, and market the product.

A Product Owner, on the other hand, is responsible for managing the product backlog and ensuring that the development team is working on the right features at the right time. They work closely with the development team to define user stories and acceptance criteria, and prioritize them based on customer needs and business value. They also collaborate with the Product Manager to ensure that the product roadmap aligns with the overall product vision.

https://www.linkedin.com/search/results/people/?keywords=engineer&origin=FACEBOOK_SEARCH&sid=S%2CJ&titleFreeText=%22product%20owner%22

Brief

Sample profiles

- Business Analyst
- System Analyst
- Program Manager

From

- Project Manager
- Chief Product Officer (CPO)
- Chief Executive Officer (CEO)

To

Can you describe your experience with user experience (UX) and user interface (UI) design? How do you ensure that the product design is both functional and aesthetically pleasing?

How do you collaborate with the development team to ensure that the product meets customer needs and business goals?

What were some of the key challenges you faced during your recent product launch, and how did you overcome them?

What experience do you have with Agile development methodologies such as Scrum or Kanban?

How do you prioritize product features or user stories? Can you provide an example of how you made decisions in the past?

What techniques have you used to gather and analyze customer feedback or market research?

How do you communicate product requirements and priorities to the development team and stakeholders? Can you give an example of a time when you faced challenges in this area and how you resolved them?

How do you measure the success of a product? What metrics do you track, and how do you use these metrics to improve the product?

Career Transitions

Screening

Common requirements (Standard Skills)

- Software development life cycle (SDLC) methodologies
 - Waterfall
 - Agile - Scrum, Kanban
 - DevOps
 - Rapid application development (RAD)
 - Spiral model
- Product Backlog
 - Agile - Jira, Trello, Asana
 - Requirements management tools - eqView, IBM Doors, Jama Software
 - Product roadmap tools - Roadmunk, Aha!, ProdPad
 - User story management - Clubhouse, Miro
 - Analytics tools - Google Analytics, Mixpanel
 - Collaboration - Microsoft Teams, Slack, Zoom
- Product Flow
 - User research
 - User personas
 - User testing
 - Journey maps

Prioritizing user stories, product features

Project management

Communication skills

Analytical and problem-solving

Deviation from the standard

Specific industry background?

Mix of two roles?

Management methodology?

Types of products worked on? B2B / B2C?

Work on-site, hybrid, or fully remote?

How much experience is enough?

Industry X really necessary?

Anything interesting about the team, product, project, or company?

Any interesting challenges ahead?

Who is this a dream job for?
